9/30/81

THE FREQUENCY OF FLYING
AMONG
THE GENERAL PUBLIC

1981

Results of a survey conducted by
The Gallup Organization, Inc.
for
The Air Transport Association of
America

September 1981

INTRODUCTION

Objectives of the Survey

This is a report on one of a series of surveys conducted for the Air Transport Association of America to obtain information about the incidence of flying on commercial airlines among a sample of the nation's adult population. More specifically the survey was designed to find out:

1. How many adults have ever flown on a commercial airline;
2. How many adults have flown on a commercial airline during the last year;
3. How many trips were taken during the last year within the United States; how many trips were taken to Canada, to Mexico or the Caribbean, and to other international points;
4. How many trips were taken for business purposes and how many trips were taken to visit friends or relatives, to sightsee, or for other purposes to the various areas.

Trend information is based on surveys conducted with comparable samples conducted in 1971, 1972, 1973, 1974, 1977, and 1979.

Design of the Research

The survey is based on personal interviews conducted with a national sample of 4,606 adults, 18 years of age and older, during the period of June 18-July 27, 1981.

The questions asked in 1981 differed slightly from those asked in 1977 and 1979. A copy of the 1981 questions will be found in the Technical Appendices at the end of the report. The questions relating to charter flights contained in the 1977 and 1979 surveys were omitted in 1981 and the destinations which were studied were changed. Specifically, the destinations questioned about in 1981 were:

- A. Within the United States
- B. To Canada
- C. To Mexico or the Caribbean (including Puerto Rico)
- D. To other international points

In 1979 and 1977, those interviewed were questioned about the following destinations:

- A. Within the continental 48 states, excluding Hawaii and Alaska
- B. To Hawaii
- C. To Alaska
- D. To Canada
- E. To other international points

This change in destinations was made both on Q.2 -

"How many air trips did you take in the past 12 months to each of the places listed on this card?"

and on Questions 3, 4, and 5 -

"In the past twelve months, of the _____ trips to (destinations A or B, C, or D), how many were for each of the reasons listed on this card?"

Thus, trend data on the number of persons traveling within the United States and Canada is not comparable. In 1981 only the net figure including Alaska and Hawaii is available, whereas in earlier years this data was not reported as a net.

*"Technical Appendices"
only included in
report circulated to
ATA personnel.
Re. Fd's call*

Trend figures on the number of trips within the U.S. and Canada is included as well as net international travel figures for 1981 (including both Mexico/Caribbean and other international destinations).

In addition, as noted in the 1979 report, a change in wording was made in 1977 from the questions asked in previous years. For example, the first question was changed to:

"Have you ever flown on any commercial airline?"

Prior to 1977, the question read:

"Have you ever flown on any of the regular passenger airlines?"

Since 1977, those interviewed have been asked:

"Have you taken any air trips on any commercial airline in the past 12 months?"

Those who had taken any trips were asked:

"How many air trips did you take in the past 12 months to each of the places listed on this card? Please count each round trip as one trip. First, how many trips have you taken to (destination)?"

The places listed included the destinations discussed on page 2.

The surveys prior to 1977 included this question with a different definition of a trip:

"How many trips have you made on a regular passenger airline in the past twelve months? Please count going to your main destination as one trip and your return as a second trip."

It should be noted that the question asked since 1977 about the purpose of trips taken differed from those asked in previous surveys. In 1977, 1979, and 1981 the question asked included:

"In the past 12 months, of the trips to (destination) how many were mainly for each of the reasons listed on this card? First, how many were for business reasons?"

The reasons listed included business reasons, visiting friends or relatives, and sightseeing/visiting a resort. Similar questions were asked about trips to other destinations.

The earlier surveys included the following question:

"How many of the trips you took in the past 12 months were business trips and how many were for pleasure or personal reasons?"

The report includes trend information on some of the questions. While much of the information sought in 1977, 1979 and 1981 was about the same as in previous years and some comparisons are reported, it should be kept in mind that any changes in wording can produce results which are not strictly comparable.

As of June, 1981, it is estimated that the national non-institutional population of persons 18 years of age and older is 158,470,000*. This estimate includes all adults except those in such institutions as prisons, hospitals, homes for the aged, etc. The total population of the United States, including children is estimated to be 229,000,000** as of April 1, 1981.

A description of the design of the sample, the composition of the sample and tables of sampling tolerances will be found in the Technical Appendices at the end of the report.

Summary of Principal Findings
How Many Adults Have Ever Flown and Flown In the Last
Twelve Months

Based on the current survey which was conducted in June and July of 1981, about two out of three (65%) persons 18 years of age and older have ever flown on a commercial airline. This percentage represents 103,005,500 people out of the total adult non-institutional population of 158,470,000. In 1979, the same proportion of the population had ever flown (65%), representing 101,000,000 adults, and in 1977, 63% or 94,500,000 adults had ever flown. In 1971, the first year the study was conducted, only 49% of the adults had ever flown.

The following table presents the proportions of the demographic groups who have ever flown and those who have flown within the past twelve months. A higher proportion of men (68%) than women (62%) have ever flown, and a considerably larger proportion of the white than of the non-white population have flown (67% and 50% respectively). Among the age groups, the incidence of having ever flown on a commercial airplane is higher among those 25 to 49 years of age (70%) than among older (61%) or younger (58%) people. As might be expected, the incidence of having ever flown is directly related to income, being highest among those with incomes of \$40,000 and over (83%), and declining to 75% among those with incomes of \$20,000-\$39,999, and to even lower levels among those with incomes of \$10,000-\$19,999 (62%), or less than \$10,000 (46%). Additionally, those in white collar households, particularly the professional and business group (82%) are more likely than others to have flown, and residents of the West (81%) are much more likely than those in the East (66%), Midwest (61%), or South (56%) to have flown.

One out of four (24%) reported having flown in the twelve months preceding the interview, which projects to 38,032,800 American adults. This is somewhat lower than in 1979 when 27% or 42,000,000 had flown in the year prior to the survey, but similar to the results in 1977, when 25% or 37,500,000 people had flown in the previous twelve months. Demographic groups with the highest proportions of those who had flown in the last year were those with incomes of \$40,000 and over (46%), those in the professional and business occupation group (42%), and residents of the West (33%).

South	39	45	43	45	53	55	56	18	19	18	21	19	22	20
West	68	70	70	73	80	81	81	29	32	33	32	35	39	33

Trend information by income groups was not reported in the previous table because of large changes which have occurred in recent years in family income due to changes in the value of the dollar. The results for 1981 in the proportions of each group who have ever flown and have flown in the last year are:

	Ever Flown %	Flown In Past 12 Months %
<u>Family Income</u>		
\$40,000 and over	83	46
\$25,000-\$39,999	76	33
\$20,000-\$24,999	74	23
\$15,000-\$19,999	65	22
\$10,000-\$14,999	60	17
\$5,000-\$9,999	49	13
Under \$5,000	42	10

The results were also tabulated by family income groups within age groups. The following table presents the percentage of respondents who have flown in the last year by income and age group. The data suggests that income is less likely to affect the flying habits of 18-24 year olds than older people. For example, the incidence of having flown in the past year is similar among these young adults with annual family incomes of \$15,000-\$24,999 as among those with incomes of \$25,000 and over, whereas among older people, particularly those 35 and older, the incidence of having flown in the past year is considerably higher among the affluent than others.

	Flown in Past Year			
	18-24 Years %	25-34 Years %	35-49 Years %	50 Years and Older %
<u>Family Income</u>				
\$25,000 or more	26	38	42	41
\$20,000-\$24,999	30	28	15	22
\$15,000-\$19,999	24	28	17	20
\$10,000-\$14,999	20	20	15	16
Under \$10,000	16	11	10	12

How Many Trips In Past Twelve Months

Those who had ever flown were asked how many trips they had made on a commercial airline during the twelve months preceding the survey. Approximately half of those who flew during the past year took only one trip. Results were as follows for the seven surveys conducted since 1971:

	X PERCENTAGE OF ALL PERSONS INTERVIEWED						
	<u>1971</u>	<u>1972</u>	<u>1973</u>	<u>1974</u>	<u>1977</u>	<u>1979</u>	<u>1981</u>

10 or more trips	1	1	1	1	1	2	1
<u>Never Flown</u>	<u>51</u>	<u>46</u>	<u>46</u>	<u>45</u>	<u>37</u>	<u>35</u>	<u>35</u>
TOTAL	100	100	100	100	100	100	100
Number of Interviews	(3047)	(3137)	(3120)	(3066)	(3030)	(3101)	(4606)

*Less than one-half of one percent

**In surveys before 1977, one trip was defined as going to the main destination and the return was a second trip. In 1977, 1979 and 1981, a round trip was considered one trip. Therefore for surveys before 1977 one trip was by earlier definition one or two trips, two trips were 3 or 4 trips, etc. The number of trips shown on the table are for the 1977 definition.

How Many Trips in Past Twelve Months? (continued)

The table which follows shows that about half (49%) of those who have flown during the last twelve months have made only one trip. These infrequent fliers accounted for 16% of all trips taken in the last 12 months. Moderate fliers who took between two and twelve trips made up about half (47%) of those who flew in the last 12 months and account for more than half (53%) of all trips. Frequent fliers, those who took more than twelve trips during the last 12 months, included only three percent (3%) of the fliers but they took 31% of all trips. The proportion of trips accounted for by frequent fliers decreased from 36 to 31 percent between 1979 and 1981.

FLEW IN LAST 12 MONTHS

	Number Of Trips	Fliers			Trips		
		<u>1977</u> %	<u>1979</u> %	<u>1981</u> %	<u>1977</u> %	<u>1979</u> %	<u>1981</u> %

	11	.5	.4	.1	1.8	2.1	.2
	12	.9	1.3	.9	3.9	4.3	3.5
Frequent Fliers (Over 12 trips)		<u>3.2</u> 100.0	<u>3.7</u> 100.0	<u>3.3</u> 100.0	<u>28.0</u> 100.0	<u>36.2</u> 100.0	<u>30.6</u> 100.0
Number Fliers/Trips		748	819	1139*	2292	2288	3620*

*Increase in fliers and trips in 1981 reflects increased total sample size on this survey compared to 1977 and 1979 samples.

Destination of Air Trips

11

The table below reports the percentage of all adults who made one or more trips to each destination listed and also the percentage of those who had flown in the last year who made one or more trips to each destination. The totals exceed the percentage who had flown in the last year since some of the people flew to more than one destination.

	<u>All Adults</u>	<u>Flown In</u>
	<u>%</u>	<u>Last 12 Months</u>
	<u>%</u>	<u>%</u>

To other International Points (other than Mexico & Caribbean)	—	—	5
Totals	100	100	100

*See note on page 2 about the change in destination questions on the 1981 survey.

Purpose of Trips Taken

12

Those who had flown during the year preceding the survey were asked how many of the trips taken during the last twelve months were for business and how many were taken for other reasons such as visiting friends or relatives, sightseeing, etc. The table below shows that the percentage of all adults who have taken business trips in the last year hasn't changed very much since 1971 while the percentage taking pleasure trips has. In 1971, eight percent of adults had taken business trips (5% business trips only plus 3% both kinds). In 1981, nine percent took business trips. The proportion taking Pleasure/Personal trips increased from 16 percent to 22 percent from 1971-1979, but showed a decline (-3 percentage points) to 19% in 1981.

	PERCENTAGE OF ALL ADULTS							PERCENTAGES OF THOSE WHO HAVE FLOWN IN PAST 12 MONTHS						
	1971	1972	1973	1974	1977	1979	1981	1971	1972	1973	1974	1977	1979	1981

*Less than one-half of one percent

Purpose of Trips Taken (continued)

While the proportion of people who took air trips for business reasons increased somewhat, the proportion who took trips for pleasure or personal reasons slightly decreased. However, the data shown below suggests that the slightly increased proportion of business fliers took fewer trips per person in 1981, whereas the somewhat reduced proportion of pleasure fliers accounted for a slightly greater number of trips per flier than in 1979.

The proportions of those who had taken one or more trips during the last year on commercial airlines for various reasons are as follows:

	<u>1977</u> %	<u>1979</u> %	<u>1981</u> %
Pleasure or Personal Reasons	77	81	79
Visiting friends or relatives	53	55	55
Sightseeing/visiting a resort	20	25	26
Other reasons	<u>11</u>	<u>11</u>	<u>7</u>
Business Reasons	<u>36</u>	<u>32</u>	<u>36</u>
	113*	113*	115*

The division between business and pleasure/personal trips for five surveys follows:

	<u>Percent of Total Trips Taken in 12 Months **</u>				
	<u>1973</u> %	<u>1974</u> %	<u>1977</u> %	<u>1979</u> %	<u>1981</u> %
Business trips	46	49	52	55	52
Pleasure/personal trips	<u>54</u>	<u>51</u>	<u>48</u>	<u>45</u>	<u>48</u>
	100	100	100	100	100

The 1981 distribution of business vs. pleasure fliers and trips is very similar to that shown in 1977.

*Total exceeds 100% since some adults took more than one kind of trip. Also the sum of various kinds of pleasure/personal trips exceeds the percent taking such trips because of multiple answers.

**See note page 4 for comment about this table

Purpose of Trips Taken (continued)

As reported in the following table, more than half (55%) of all domestic trips were for business reasons while only one-fourth (25%) of the international trips were for business reasons.

	Percent of Trips Taken in Last 12 Months		
	Domestic*	Inter-national	Total Trips
	%	%	%
Business Trips	55	25	52
Pleasure/Personal Trips	45	75	48
Visiting friends or relatives	32	28	32
Sightseeing/visiting a resort	9	45	12
Other reasons	<u>4</u>	<u>2</u>	<u>4</u>
Total Trips	<u>100</u>	<u>100</u>	<u>100</u>
Number of Trips	(3266)	(364)	(3630)

As might be expected, more than four of every five (81%) business trips were taken by men. A majority (56%) of all trips taken for pleasure or personal reasons were taken by women. The non-white segment of the population took five percent of all business trips and ten percent of all trips taken for pleasure or personal reasons. Fliers in their middle years (25-49 years) account for 69 percent of the business trips and 47 percent of trips for pleasure or personal reasons. A majority (53%) of all business trips were taken by those with family incomes of \$40,000 or more. More than one-third (38%) of the trips taken for pleasure or personal reasons were taken by those with incomes of \$25,000 or more. Seven out of ten (72%) of all the business trips but less than half (44%) of pleasure trips were taken by persons whose head of household was in the Professional and Business group.

*All 50 states plus Canada.

-NOTE-

Allowance for persons not at home was made by means of a "times-at-home" technique, rather than by "call-backs". Either procedure is a standard method for reducing the sample bias that would otherwise result from underrepresentation in the sample of persons who are difficult to find at home. All results reported, including the composition of the sample, are based on data in which a "times-at-home" weighting has been incorporated. The actual number of interviews made for various population groups is reported in the findings.

THE DESIGN OF THE SAMPLE

The sampling procedure is designed to produce an approximation of the adult civilian population, eighteen years and older, living in the United States, except for those persons in institutions such as prisons or hospitals.

The design of the sample is that of a replicated, probability sample down to the block level in the case of urban areas, and to segments of townships in the case of rural areas. Approximately three hundred sampling locations are used in each survey. Interpenetrating samples can be provided for any given study when appropriate.

The sample design included stratification by these four size-of-community strata, using 1970 Census data: (a) cities of population 1,000,000 and over; (b) 250,000 to 999,999; (c) 50,000 to 249,999; (d) all other population. Each of these strata was further stratified into seven geographic regions: New England, Middle Atlantic, East Central, West Central, South, Mountain, and Pacific. Within each city size - regional stratum, the population was arrayed in geographic order and zoned into equal sized groups of sampling units. Pairs of localities were selected in each zone, with probability of selection of each locality proportional to its population size in the 1970 Census, producing two replicated samples of localities.

Within localities so selected for which the requisite population data are reported, subdivisions were drawn with the probability of selection proportional to size of population. In all other localities, small definable geographic areas were selected with equal probability.

Separately for each survey, within each subdivision so selected for which block statistics are available, a sample of blocks or block clusters is drawn with probability of selection proportional to the number of dwelling units. In all other subdivisions or areas, blocks or segments are drawn at random or with equal probability.

In each cluster of blocks and each segment so selected, a randomly selected starting point is designated on the interviewer's map of the area. Starting at this point, interviewers are required to follow a given direction in the selection of households until their assignment is completed.

Interviewing is conducted at times when adults, in general, are most likely to be at home, which means on weekends, or if on weekdays, after 4:00 P.M. for women and after 6:00 P.M. for men.

Allowance for persons not at home is made by a "times-at-home" weighting* procedure rather than by "call-backs". This procedure is a standard method for reducing the sample bias that would otherwise result from under-representation in the sample of persons who are difficult to find at home.

The pre-stratification by regions is routinely supplemented by fitting each obtained sample to the latest available Census Bureau estimates of the regional distribution of the population. Also minor adjustments of the sample are made by educational attainment by men and women separately, based on the annual estimates of the Census Bureau (derived from their Current Population Survey) and by age.
